## DAHLIA, ESSENTIAL SIMPLICITY

*GEWISS presents its new range of plates: a clean, rectangular shape enhanced by a smooth, contemporary finish, to frame controls with style.*

DAHLIA is the new wiring device system designed by GEWISS, bringing a touch of class to the contemporary home. With an **elegant appearance and classic shape**, DAHLIA complements the decor of your home with minimal and sophisticated forms. A simple and discrete Italian design that offers a sense of harmony and aesthetics to residential spaces. The clean, rectangular shape is enhanced by a smooth, contemporary finish, to frame controls with style.

Dahlia lets you express your personality with **many colour options - a signature feature of the new GEWISS plates**: White, Ivory, Light Grey, Hemp, Dark Grey, Cream, Anthracite Grey. **Switches too**, can be added in two shades, white or ivory, so you can choose your preferred combination for the control point.

The range offers a combination of styles, and also functions as Dahlia can adapt to your specific home automation management requirements, **providing a wide range of configurations**: the modular design of the plates offers versions from 2 to 2+2+2+2+2 gangs, or double-plates for double-sockets. Furthermore, Dahlia can be oriented vertically or horizontally, minimising the number of product codes and making installation easier.
